

## CLAIM\$

1. A single-layer or multi-layer, heat-shrinkable film having a layer of a thermoplastic resin material comprising an alicyclic structure-containing polymer (A) having a repeating unit (a) consisting of an alicyclic structure, wherein a proportion of a repeating unit (b) of a ring structure having no norbornane ring structure in the repeating unit (a) is at least 10% by weight.

10 2. The heat-shrinkable film according to Claim 1, wherein the thermoplastic resin material layer is a layer of a resin composition comprising a soft polymer (B) in addition to the alicyclic-structure containing polymer (A).

15 3. The heat-shrinkable film according to Claim 1, which is a multi-layer, heat-shrinkable film further having at least one crystalline resin layer in addition to at least one layer of the thermoplastic resin material.

20 4. The heat-shrinkable film according to Claim 1, which is a film stretched at a draw ratio of at least 1.5 times in at least an uniaxial direction.

25 5. The heat-shrinkable film according to Claim 4, which is a film biaxially stretched at a draw ratio of 1.5 to 10 times in each of machine and transversal directions.

6. The heat-shrinkable film according to Claim 1,  
wherein the film impact retention after heat shrinking is  
at least 70%, and the rate of increase of water vapor  
transmission rate after heat shrinking is at most 1.20.

5

7. The heat-shrinkable film according to Claim 1,  
wherein the heat shrinkage factor when the film is held  
under a temperature atmosphere ranging from a temperature  
lower by 40°C than the glass transition temperature of the  
10 alicyclic structure-containing polymer (A) to a temperature  
higher by 80°C than the glass transition temperature [(Tg -  
40°C) to (Tg + 80°C)] is 3 to 70%.

8. The heat-shrinkable film according to Claim 1,  
15 which has a thickness of 1 to 100  $\mu\text{m}$ .

9. The heat-shrinkable film according to Claim 1,  
wherein the alicyclic structure-containing polymer (A) has  
a weight average molecular weight of 5,000 to 500,000, a  
20 glass transition temperature of 50 to 300°C and a melt flow  
rate of 0.5 to 150 g/10 min as measured at a temperature of  
280°C under a load of 2.16 kg in accordance with JIS K 6719.

10. The heat-shrinkable film according to Claim 1,  
25 wherein a proportion of the repeating unit (a) consisting  
of the alicyclic structure in the alicyclic structure-  
containing polymer (A) is at least 50% by weight.

TOP SECRET EYES ONLY

11. The heat-shrinkable film according to Claim 1,  
wherein the alicyclic structure-containing polymer (A) is a  
thermoplastic norbornene resin.

5 12. The heat-shrinkable film according to Claim 11,  
wherein the thermoplastic norbornene resin is a  
hydrogenated product of a ring-opening (co)polymer of a  
norbornene monomer.

10 13. The heat-shrinkable film according to Claim 11,  
wherein the repeating unit (b) of the ring structure having  
no norbornane ring structure is a repeating unit derived  
from a ring-opening (co)polymer of at least one norbornene  
monomer selected from the group consisting of norbornenes,  
15 dicyclopentadienes, methanotetrahydrofluorenes and  
methanohexahydroanthracenes.

20 14. The heat-shrinkable film according to Claim 12,  
wherein the alicyclic structure-containing polymer (A) is a  
hydrogenated product of a ring-opening polymer of a  
dicyclopentadiene.

25 15. The heat-shrinkable film according to Claim 12,  
wherein the alicyclic structure-containing polymer (A) is a  
hydrogenated product of a ring-opening copolymer of a  
norbornene and a dicyclopentadiene

TO 2080-874-1

16. The heat-shrinkable film according to Claim 12, wherein the alicyclic structure-containing polymer (A) is a hydrogenated product of a ring-opening copolymer of a norbornene and a tetracyclododecene.

5

17. The heat-shrinkable film according to Claim 2, wherein the soft polymer (B) is a polymer having a glass transition temperature of at most 30°C.

10

18. The heat-shrinkable film according to Claim 3, wherein the crystalline resin is at least one polyolefin resin selected from the group consisting of polyethylene resins and polypropylene resins.

15

19. The heat-shrinkable film according to Claim 1, wherein the heat-shrinkable film is a multi-layer, heat-shrinkable film, and a proportion of the thickness of the layer of the thermoplastic resin material comprising the alicyclic structure-containing polymer (A) is 10 to 90% based on the total thickness of the film.

20

20. A package obtained by thermally shrink-wrapping a product to be packaged with the heat-shrinkable film according to any one of the Claims set forth above.
